* NOTE: Additional occupational earnings reports are available upon request for auto repair shops (June 1951) and power laundries (May 1951).

Introduction ^{1/}

The Kansas City area is one of several important industrial centers in which the Bureau of Labor Statistics is currently conducting occupational wage surveys. Occupations that are common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) separate data have been provided wherever possible for individual broad industry divisions.

Occupations that are characteristic of particular, important, local industries have been studied on an industry basis, within the framework of the community survey. ^{2/} Earnings data for these jobs have been presented in Series B tables. Union scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective-bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices.

Data have also been collected and summarized on shift operations and differentials, hours of work, and supplementary benefits including vacation and sick leave allowances, paid holidays, nonproduction bonuses, and insurance and pension plans.

The Kansas City Metropolitan Area

The 4-county Kansas City Metropolitan Area consisting of Jackson and Wyandotte Counties in Kansas, and Clay and Johnson Counties in Missouri had an estimated total population of 814,500 in 1950. The municipality of Kansas City, Mo., accounted for more than half of this total, the remainder being distributed among Kansas City, Kans., Independence, Mo., and other cities, villages, and unincorporated areas. The population and the total labor force of the metropolitan area increased approximately 20 percent during the 10-year period 1940 to 1950.

^{1/} Prepared in the Bureau's regional office in Chicago, Ill., by James W. Shanks under the direction of George E. Votava, Regional Wage and Industrial Relations Analyst. The planning and central direction of the program was carried on in the Branch of Community Wage Studies of the Bureau's Division of Wages and Industrial Relations in Washington, D. C.

^{2/} See appendix for discussion of scope and method of survey.

In October 1951, employment in the area totaled over 366,000 workers, of which 108,000 were employed in manufacturing establishments. Manufacturing employment was divided almost equally between firms producing durable and nondurable goods. ^{3/} Employment in the durable-goods industries was dominated by the transportation-equipment group, reflecting the growing importance of Kansas City as an automobile, truck, and aircraft manufacturing center. Other durable-goods industry groups of substantial importance in the Kansas City area include fabricated metal products, ordnance and accessories, primary metals, electrical machinery, and nonelectrical machinery.

Of primary importance among the nondurable-goods industry groups in the Kansas City area is food and kindred products. The Kansas City meat packing industry, which suffered serious damage in the recent Missouri River flood, has nevertheless retained its position of national importance. Among other significant segments of the food products industry in Kansas City are grain-mill and bakery products. Additional segments of the nondurable-goods industries in Kansas City which are of importance include paper, printing, and publishing; chemicals; and textile and apparel products.

An employment of more than 100,000 workers in wholesale and retail trade activities in the Kansas City Metropolitan Area signify this city's importance as a commercial center which serves the vast mid-continent market area. The steady growth of manufacturing and commerce in Kansas City has been paralleled by the development of substantial transportation, communication, and public utilities; services; and finance industries. Rail, water, air, and highway transportation provide the facilities necessary to move commodities and people to and from the Kansas City area. The transportation needs are served by 12 major trunk-line railroads, 137 truck lines, 5 airlines, 14 bus lines, and Missouri River barge traffic.

Occupational Wage Structure

Extensive unionization is indicated by the fact that an estimated 80 percent of the plant workers within scope of the study were employed in establishments having written agreements with labor organizations. Union contract coverage for plant workers among establishments in the transportation, communica-

^{3/} See appendix table for listing of durable- and nondurable-goods industries.

tion, and other public utilities group was almost universal. Nearly 90 percent of the plant workers in manufacturing and more than 80 percent in the service industries were employed in union plants. Although less extensive than among other nonmanufacturing industries, union contract coverage was substantial in wholesale and retail trade; and finance, insurance, and real estate establishments. Over half the total number of plant workers in each of these industry divisions were employed in establishments having written labor agreements.

Unionization among Kansas City office workers was relatively insignificant, with one major exception. Nearly 60 percent of all office workers in the transportation, communication, and other public utilities group worked in establishments having written agreements with unions covering office workers. Less than 20 percent of the office workers in each of the other industry groups, however, were covered by union contract provisions.

Wages of over three-fourths the plant workers included in the survey were formally adjusted upward between January 1950 - the base period for the Wage Stabilization Board's 10-percent "catch-up" wage formula - and the time of the study. These general wage increases were substantially more numerous after the outbreak of hostilities in Korea than during the preceding 6 months. Nearly all of these wage adjustments were made on a cents-per-hour basis. Manufacturing plant workers generally received larger increases than workers in nonmanufacturing establishments. Almost three-fourths of the manufacturing plant workers and about a fifth of the nonmanufacturing workers received wage adjustments during the period totaling at least 15 cents an hour. Many large manufacturing firms in the Kansas City area provide for wage adjustments which are based on the Bureau's Consumers' Price Index. Several firms included in the survey had negotiated general wage increases to become effective upon approval by the WSB.

General wage changes for office workers were less extensive than for plant workers. Individual merit or length of service increases are more commonly used by firms to adjust salary levels of office workers.

Formalized rate structures for time-rated workers were reported in establishments employing more than three-fourths of the plant workers, and were common in all broad industry groups within the scope of the survey. Plans providing single rates were slightly more prevalent than those with rate ranges. Most office workers in the Kansas City area were employed in estab-

lishments that based clerical salaries on formalized wage structures. Individual determination of salary rates for office workers, however, prevailed in the service industries and among nondurable-goods industries.

Incentive methods of wage payments among Kansas City plant workers were relatively insignificant in all nonmanufacturing industry groups. Among nondurable-goods manufacturing establishments, however, approximately a fourth of all plant workers participated in some type of incentive wage plan. Incentive system coverage among workers in durable-goods manufacturing establishments was less extensive, accounting for slightly more than a tenth of the plant workers.

Minimum entrance rates for inexperienced plant workers were a part of the formalized wage structures of establishments employing nearly nine-tenths of the workers in the area. Although entrance rates ranged from less than 60 cents to \$1.60 an hour, half the workers were employed in establishments with minimum rates between 75 cents and \$1.20. A 75-cent minimum was the lowest rate reported in any manufacturing or public utility establishment; lower minima were found in the trade and service industries.

Single-shift operations and a 40-hour workweek were common for plant workers in Kansas City manufacturing plants. Approximately 15 percent of all plant workers, in both the durable- and nondurable-goods industries, were employed on 2d or 3d shifts. Nearly all of these workers received shift differentials usually expressed in terms of a uniform cents-per-hour addition to day rates. Most extra shift workers received differentials ranging from 4 to 7½ cents an hour. Forty-hour workweeks were prevalent among plant workers in all nonmanufacturing groups with one exception. Most workers in the service industries had workweek schedules of between 44 and 48 hours. The majority of women office workers in all industry divisions were scheduled to work 40 hours.

About a third of the durable-goods establishments, included in the study, employing over 60 percent of all plant workers in this group, based their rates of first-level supervisors (generally designated leadmen or working foremen) on a fixed differential above rates earned by those supervised. In most instances, differentials took the form of specified percentages or cents-per-hour additions to the earned rates of the most highly paid workers supervised. Other plans employed a method of fixing the minimum of supervisors' rate ranges at the maximum of the rate ranges applicable to the most highly rated worker supervised. Such supervisory pay practices were relatively infrequent among establishments in other industry groups.

A: Cross-Industry Occupations

3.

Table A-1: Office Occupations

1/ The study covered establishments with 8 or more workers in part of industry group 2337 as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Fur coats and single skirts were excluded from the study. Cutting shops (manufacturing jobbers) with 4 or more workers were included. Data relate to a September 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to warrant presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

1/ The study covered retail establishments with more than 20 workers engaged in the distribution of dairy products (Group 5452) as defined in the Standard Industrial Classification Manual (1949 edition) prepared by the Bureau of the Budget.

2/ Data limited to men workers.

3/ Excludes premium pay for overtime and night work; all occupations were paid on a time basis.

4/ Straight-time earnings (includes commission earnings).

5/ Routemen normally work a 6-day week and weekly salary data relate to this period.

Occupational Wage Survey, Kansas City, Mo., October 1951
U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

C: Union Wage Scales

(Minimum wage rates and maximum straight-time hours per week agreed upon through collective bargaining between employers and trade unions. Rates and hours are those in effect on dates indicated.)

Occupational Wage Survey, Kansas City, Mo., October 1951

U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics

Appendix - Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-1 through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.

ESTABLISHMENTS AND WORKERS IN MAJOR INDUSTRY DIVISIONS AND IN SELECTED INDUSTRIES IN KANSAS CITY, MO. 1/,
AND NUMBER STUDIED BY THE BUREAU OF LABOR STATISTICS, OCTOBER 1951

Item	Minimum number of workers in establishments studied 2/	Number of establishments		Estimated total within scope of study	Employment

Section head (insurance carriers)	17	Watchman	13
Sewer, hand (finisher) (women's and misses' coats and suits)	14	Watchman (grain milling)	14
Sewing-machine operator (women's and misses' coats and suits)	14	Welder, hand (machinery)	15
		Wrapper (bakeries)	18

The first of these is the question of the
 nature of the evidence which is to be
 considered in the trial. It is not
 sufficient to say that the evidence is
 "relevant" or "material". The evidence
 must be such as to prove the facts
 in issue. It must be such as to
 establish the guilt of the accused
 beyond a reasonable doubt. It must
 be such as to show that the accused
 committed the crime. It must be such
 as to show that the accused was the
 person who committed the crime. It
 must be such as to show that the
 accused was the person who committed
 the crime. It must be such as to
 show that the accused was the person
 who committed the crime. It must be
 such as to show that the accused was
 the person who committed the crime.

The second of these is the question of
 the weight of the evidence. It is not
 sufficient to say that the evidence is
 "relevant" or "material". The evidence
 must be such as to prove the facts
 in issue. It must be such as to
 establish the guilt of the accused
 beyond a reasonable doubt. It must
 be such as to show that the accused
 committed the crime. It must be such
 as to show that the accused was the
 person who committed the crime. It
 must be such as to show that the
 accused was the person who committed
 the crime. It must be such as to
 show that the accused was the person
 who committed the crime. It must be
 such as to show that the accused was
 the person who committed the crime.

This report was prepared in the Bureau's North Central Regional Office. Communications may be addressed to:

Adolph O. Berger, Regional Director
Bureau of Labor Statistics
226 West Jackson Boulevard
Chicago 6, Illinois

The services of the Bureau of Labor Statistics' regional offices are available for consultation on statistics relating to wages and industrial relations, employment, prices, labor turn-over, productivity, work injuries, construction and housing.

The North Central Region includes the following states:

Illinois
Indiana
Iowa
Kansas
Kentucky
Michigan
Minnesota

Missouri
Montana
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin
